Research Interest

My general areas of interest include machine learning, big data, artificial intelligence, and Bayesian model optimization. I have experience in building various models using decision trees, random forests, SVM, CRF, Naive Bayes, Bayesian Network, and deep learning architectures including but not limited to CNN, Bi-LSTM with Attention, Seq2Seq models, and VAE/CVAE for big data problems. Data grows rapidly and the need for efficient data processing and modeling increases. I am planning to direct my research toward building efficient systems that can deal with large volumes of data.
